

HOARDING

▶ INDOOR HOARDINGS

Free-Standing up to 8mH

No fixings required to anything

Completely self-supporting system

No property damaged caused for install or remove

▶ OUTDOOR HOARDINGS

'Wind Rated' Free-Standing up to 4mH

Due to the clever design of the inter-locking weights, the system offers a wide range of outdoor (wind rated) solutions for heights up to 4mH and wind speeds to 34m/s (122.4Kph)

▶ IT'S SAFE AND SECURE

A critical safety feature and specifically designed and patented to ensure the weights simply cannot be removed before the panels

Due to the patented metal plates integrated into the weights, no locking device (cable tie or chain) is required prohibit un-authorized removal.

▶ SUPPORTS CROSS BEAMS

A critical cosmetic feature to ensure the hoarding doesn't move or snake around post-installation. The hoarding stays straight.

▶ IT'S COMPACT

A single stack of weights is only 46cm deep due to the clever patented features of the 'in-built' metal plates (It's the narrowest hoarding system available)

▶ OFFERS A SUPPORT POST

This proprietary solution extends upwards from the counterweights to ensure the fulcrum point of the system is higher / increased.

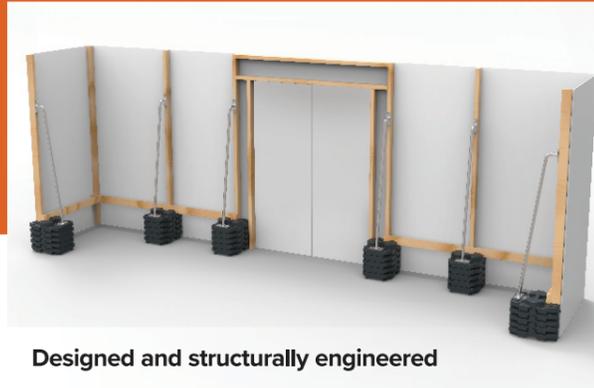

The support post also ensures that weights alone do not create any unseen trip-hazard.

▶ OFFERS A 'DOUBLE STACK' SUPPORT POST

This proprietary solution is specifically designed to improve the capability of outdoor hoardings that need to withstand wind pressure.

▶ IT'S STABLE

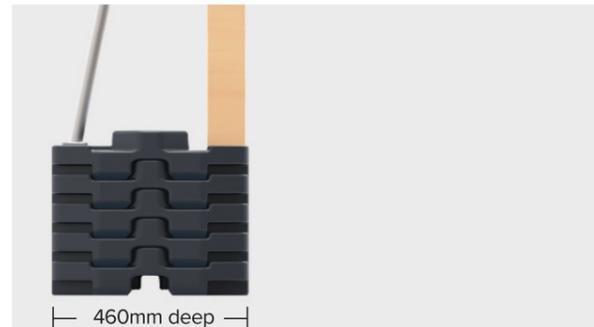

The standard MPG10 90x45 (4x2) timber is logically orientated on the strong axis for extra strength and can handle multiple panel thicknesses and types.

Designed and structurally engineered

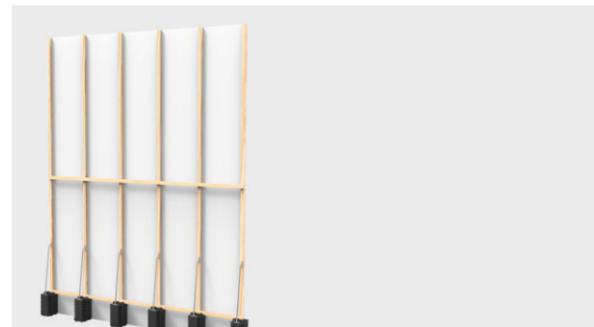

Easy to build

It's the narrowest hoarding system

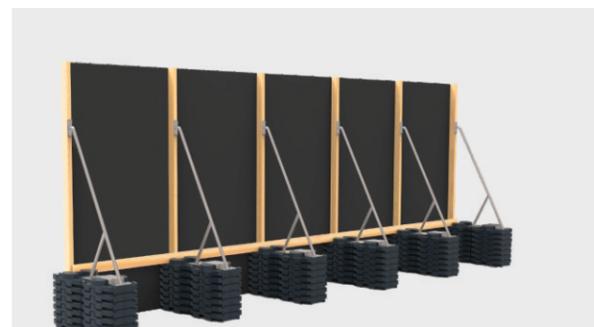

Clever support posts

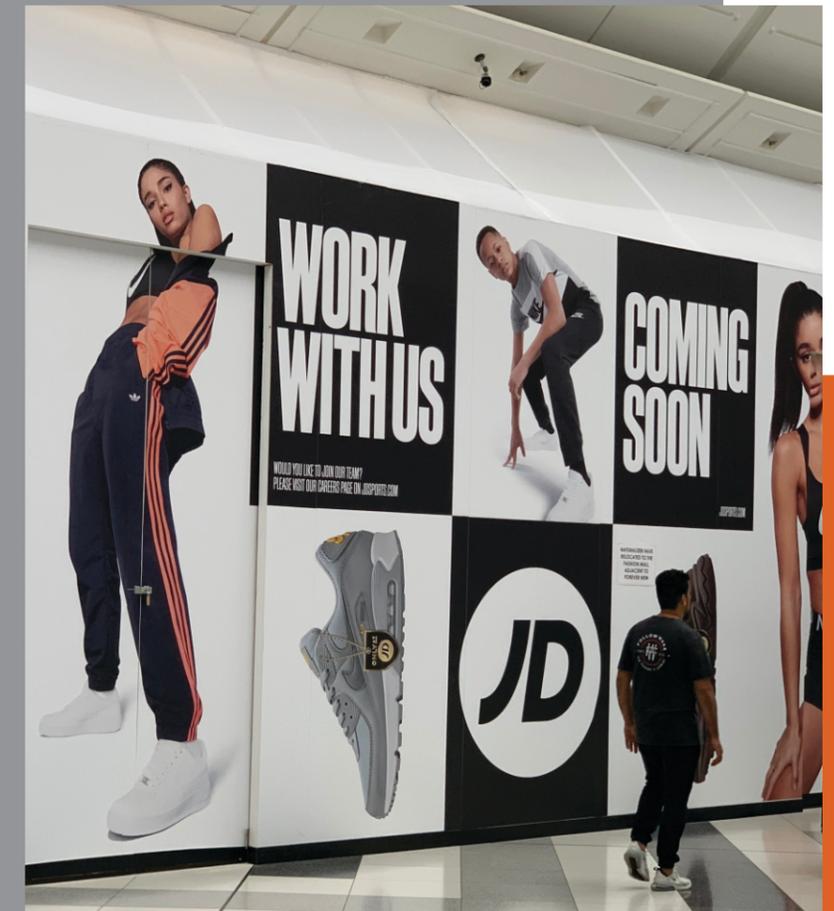

Free-standing Indoor up to 8 mH

Matched to any design layout

Free-standing outdoor up to 4 mH

INSTALLATION

▶ EXPERIENCED, CERTIFIED INSTALLERS, fully compliant and trained in all aspects of Hoarding and Decals

▶ FULLY INSURED for Work Cover, Public Liability.

PRINTING SOLUTIONS

We offer in-house printing solutions as part of our hoarding installation service, all delivered by our professional and experienced team.

GYPSUM BOARD

DRYWALL PARTITIONS

EXTERNAL HOARDING

FENCING SYSTEM

▶ GYPSUM BOARD HOARDINGS

Gypsum board hoarding is a temporary wall used to block off work areas during renovations or construction inside buildings like shopping malls, offices, airports, and shops. It is made by attaching gypsum sheets to a metal frame.

- Smooth surface
- Can be painted or used to display signs and graphics.
- Fire-resistant options.
- Helps reduce noise.
- Custom sizes.
- Not free-standing, Usually fixed to the floor or ceiling.

▶ DRYWALL PARTITIONS

A drywall partition is a lightweight, non-load-bearing wall system made of a metal or timber frame clad with gypsum boards.

Offers good sound and fire resistance, and provides a smooth finish ready for paint or decoration.

▶ EXTERNAL HOARDING AND FENCING

External hoarding and fencing are durable barriers used to secure outdoor sites, ensure safety, and block unauthorised access during construction or events.

They can also feature custom graphics for branding or project details.
